How to insert the correct CCS CONCEPTS and the correct XML Code into the Paper

Inserting CCS CONCEPTS

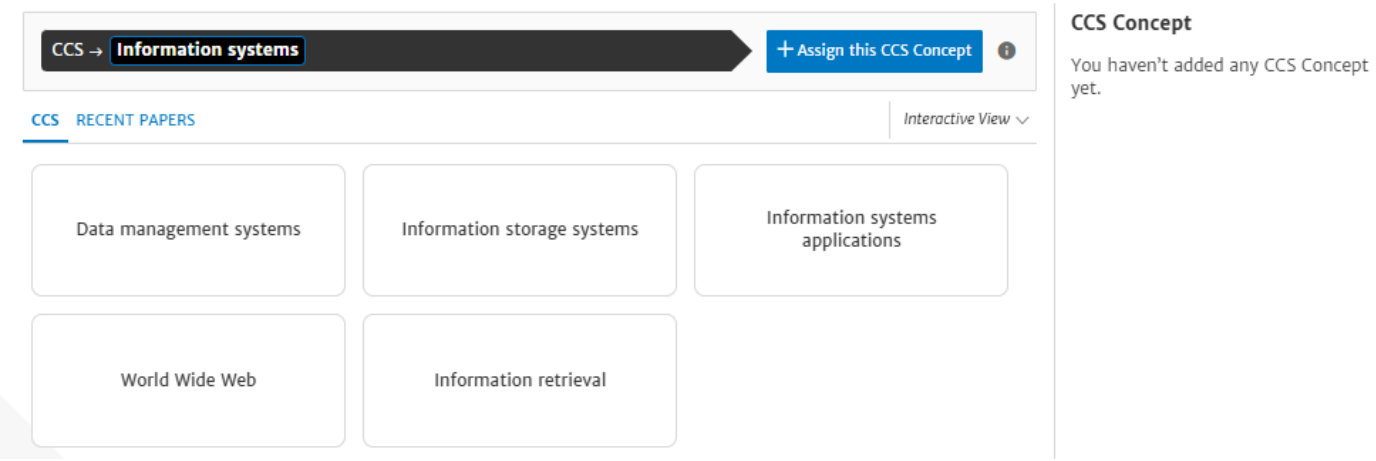

1. CCS CONCEPTS tool: Computing Classification System.
2. Navigate through the available categories and select the ones that best describe your research.
   You should start with **a general topic (**Only one general topic can be selected**)** and progressively narrow it down to the most specific sub-topics.
3. Paste the generated CCS CONCEPTS into the designated position in your paper.

Here is an example:

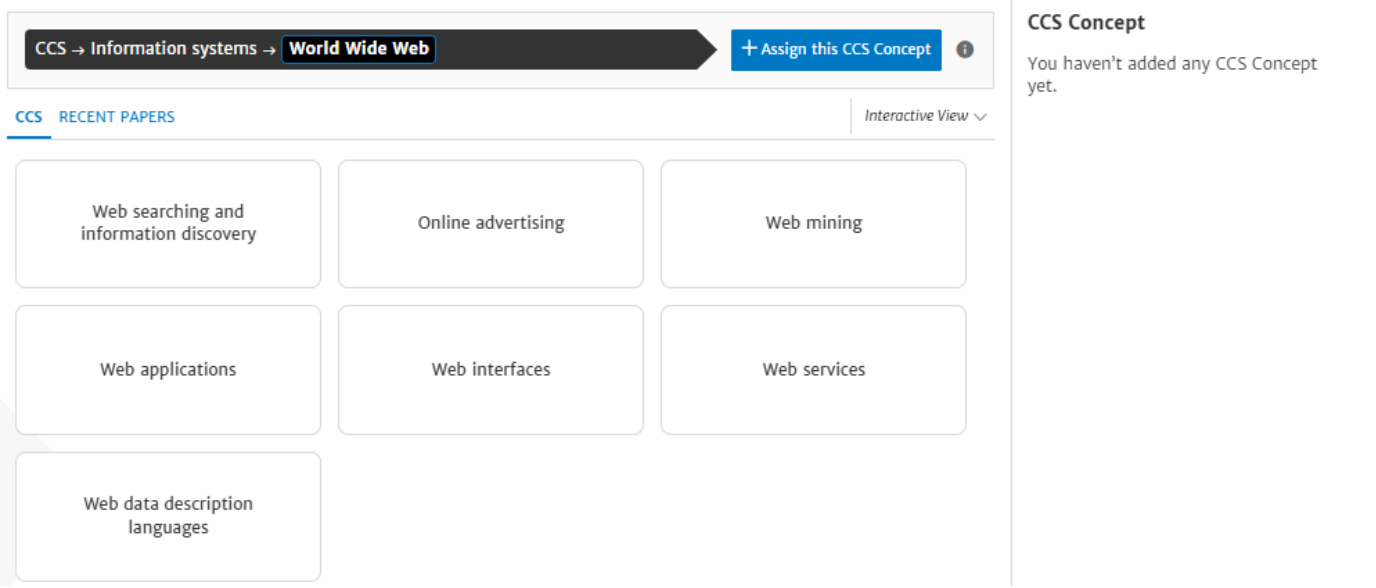

Step 1: Open the link and you will see the following page. The red box part is all the general topics. Please choose the **one** that best matches the content of your article.

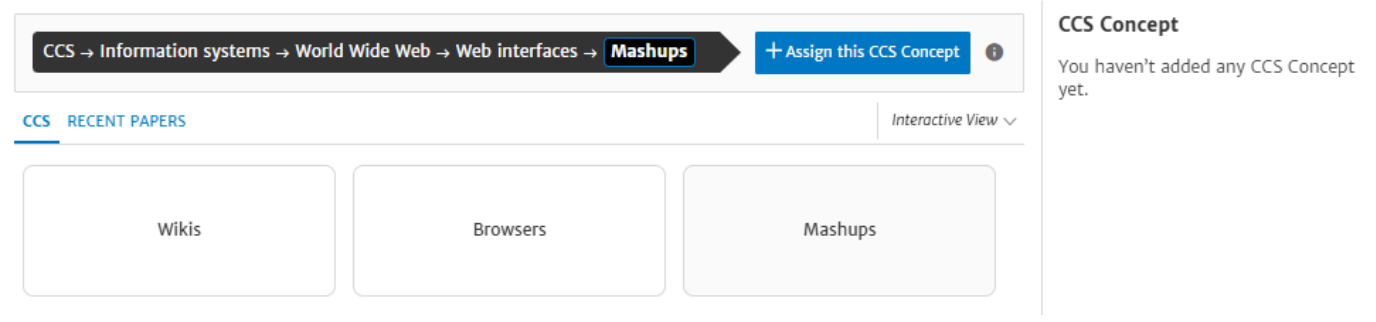

Step 2: For example, if I choose "Information Systems" as the general topic of my article, the following page will appear. At this point, you need to continue to choose a topic that better suits your paper

Step 3: After selecting the second topic "Word Wide Web", the following page will pop up, and you need to continue to select from the provided topics

Step 4: Repeat the above steps until no new options are available. Now, the four topics shown in the figure are the CCS CONCEPTS of your paper, which is **Information systems • Word Wide Web • Web interfaces • Mashups**

Step 5: Now all you need to do is insert them into the correct place in your paper.

Submission Template for ACM Papers

This is Short Title of the paper, used in page headers

This is the subtitle of the paper, this document both explains and embodies the submission format for authors using Word

First Author's Name, Initials, and Last name*

First author's affiliation, an Institution with a very long name, xxxx@gmail.com

Second Author's Name, Initials, and Last Name

Second author's affiliation, possibly the same institution, xxxx@gmail.com

Third Author's Name, Initials, and Last Name

Third author's affiliation, possibly the same institution, xxxx@gmail.com

Although there is no distinctive header, this is the abstract. This submission template allows authors to submit their papers for review to an ACM Conference or Journal without any output design specifications incorporated at this point in the process. The ACM manuscript template is a single column document that allows authors to type their content into the pre-existing set of paragraph formatting styles applied to the sample placeholder text here. Throughout the document you will find further instructions on how to format your text. If your conference's review process will be double-blind: The submitted document should not include author information and should not include acknowledgments, citations or discussion of related work that would make the authorship apparent. Submissions containing author identifying information may be subject to rejection without review. Upon acceptance, the author and affiliation information must be added to your paper.

CCS CONCEPTS • Insert your first CCS term here • Insert your second CCS term here • Insert your third CCS term here

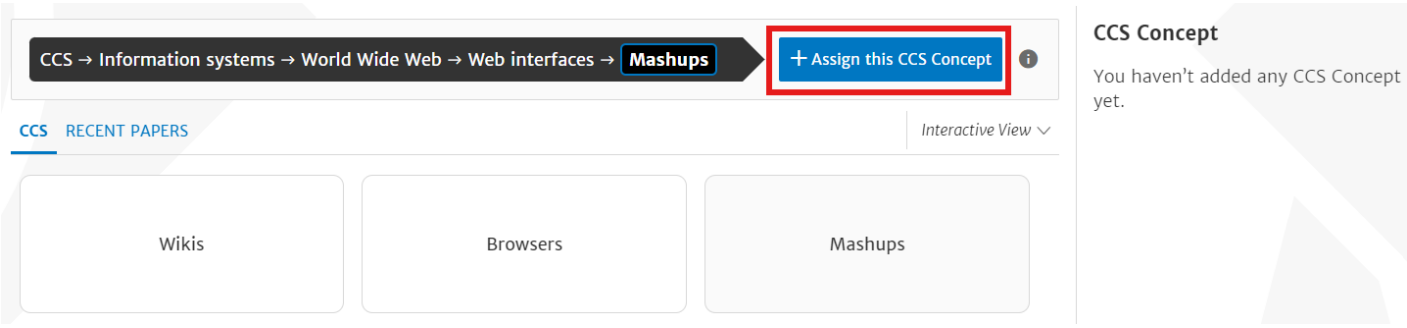

Additional Keywords and Phrases: Insert comma delimited author-supplied keyword list, Keyword number 2, Keyword number 3, Keyword number 4

ACM Reference Format:

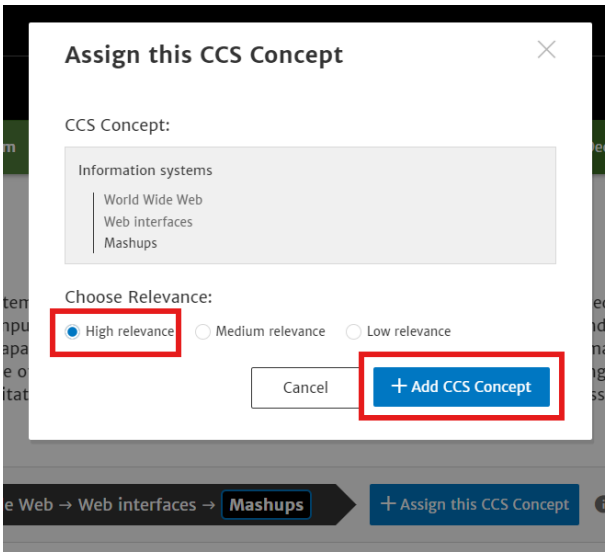

First Author's Name, Initials, and Last Name, Second Author's Name, Initials, and Last Name, and Third Author's Name, Initials, and Last Name. 2018. The Title of the Paper: ACM Conference Proceedings Manuscript Submission Template: This is the subtitle of the paper, this document both explains and embodies the submission format for authors using Word. In Woodstock '18: ACM Symposium on Neural Gaze Detection, June 03–05, 2018, Woodstock, NY. ACM, New York, NY, USA, 10 pages. NOTE: This block will be automatically generated when manuscripts are processed after acceptance.

Inserting XML Code

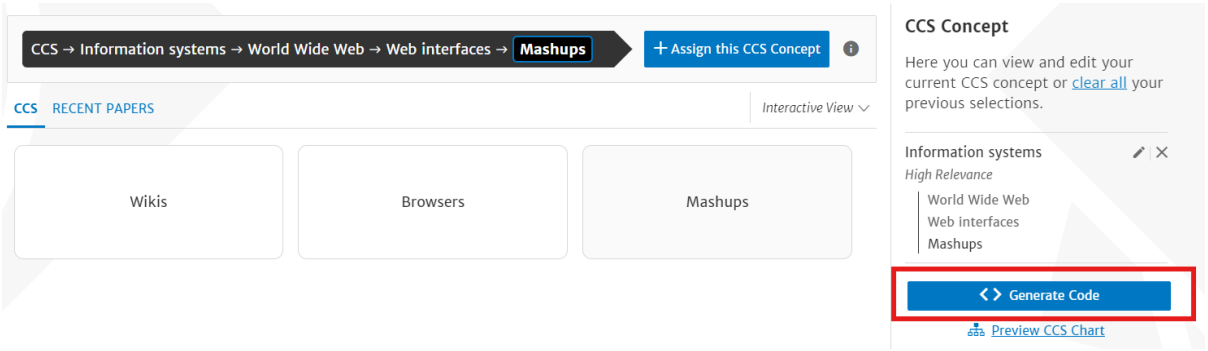

1. After selecting CCS CONCEPTS, click "+Assign this CCS Concept", which is the area surrounded by the red box.

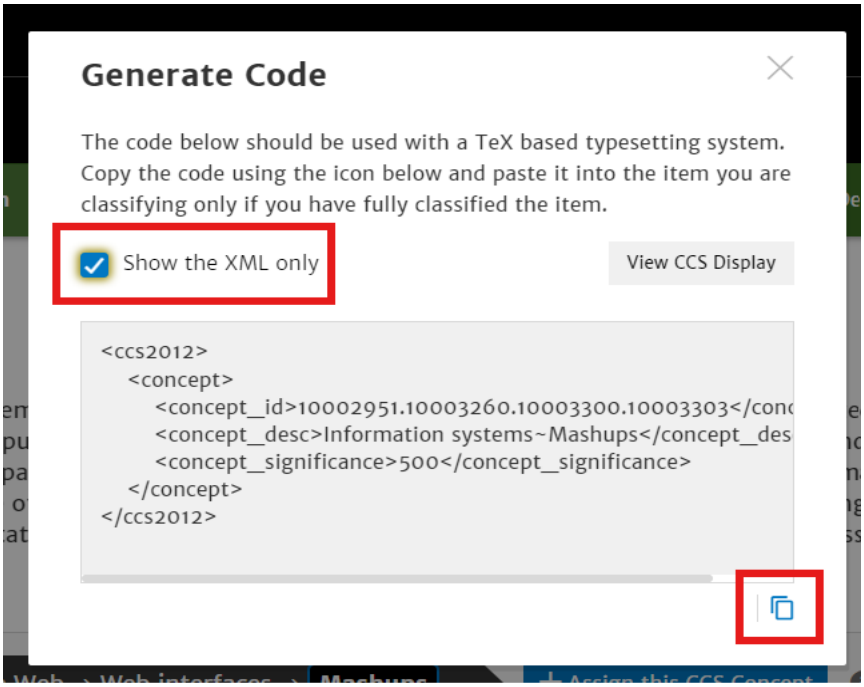

2. After clicking "+Assign this CCS concept", the following page will appear, then you should select "High relevance" and click "+Add CCS Concept"

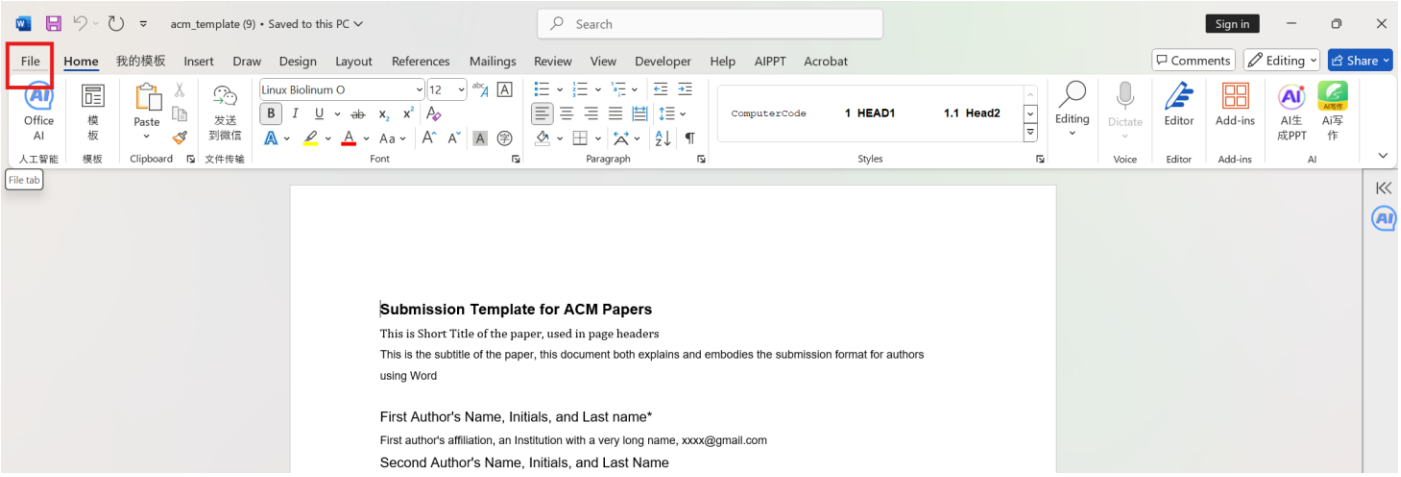

3. Then, click "<>Generate Code"

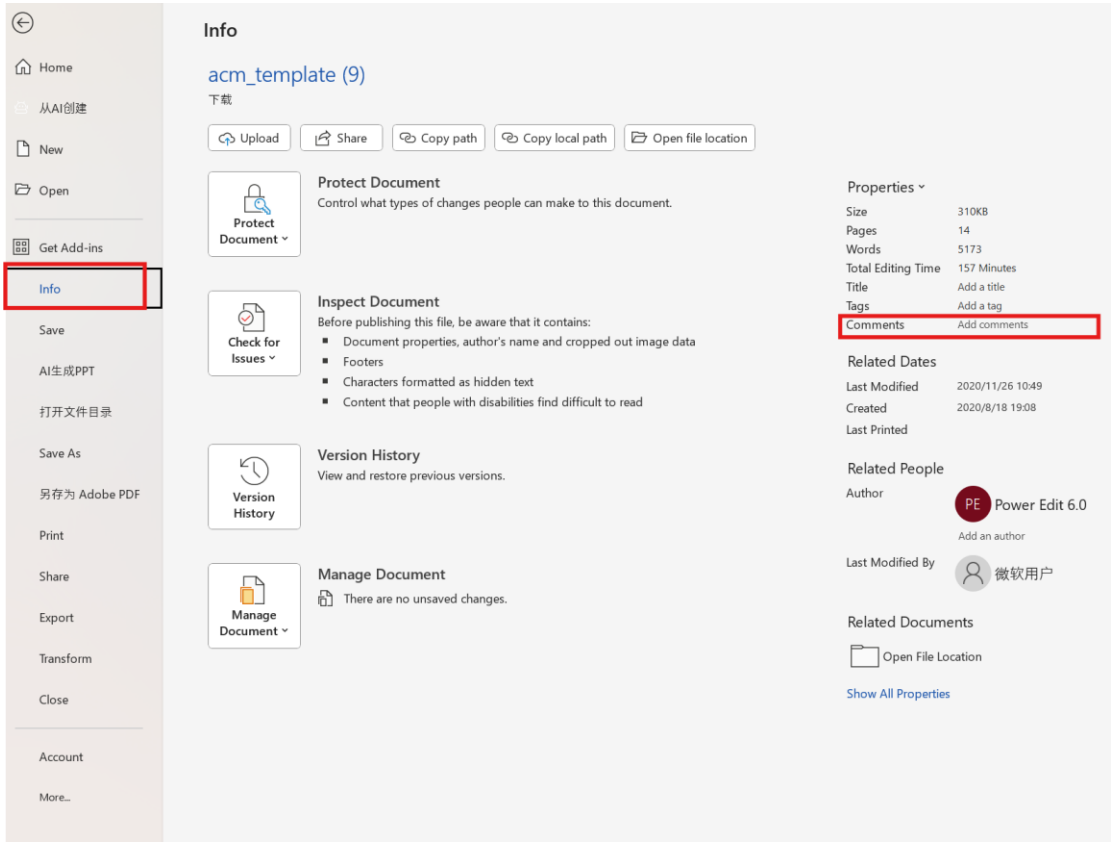

4. After choosing "Show the XML only", the page will display your **XML Code**, and then you need to click copy

5. Open the doc. file of your paper, and the click “File”

6. First click "Info", then find "Comments", and paste the **XML Code** you copied earlier into Comments

7. After adding it, just save the file.
