A Guide for attending Virtual Events using ZOOM

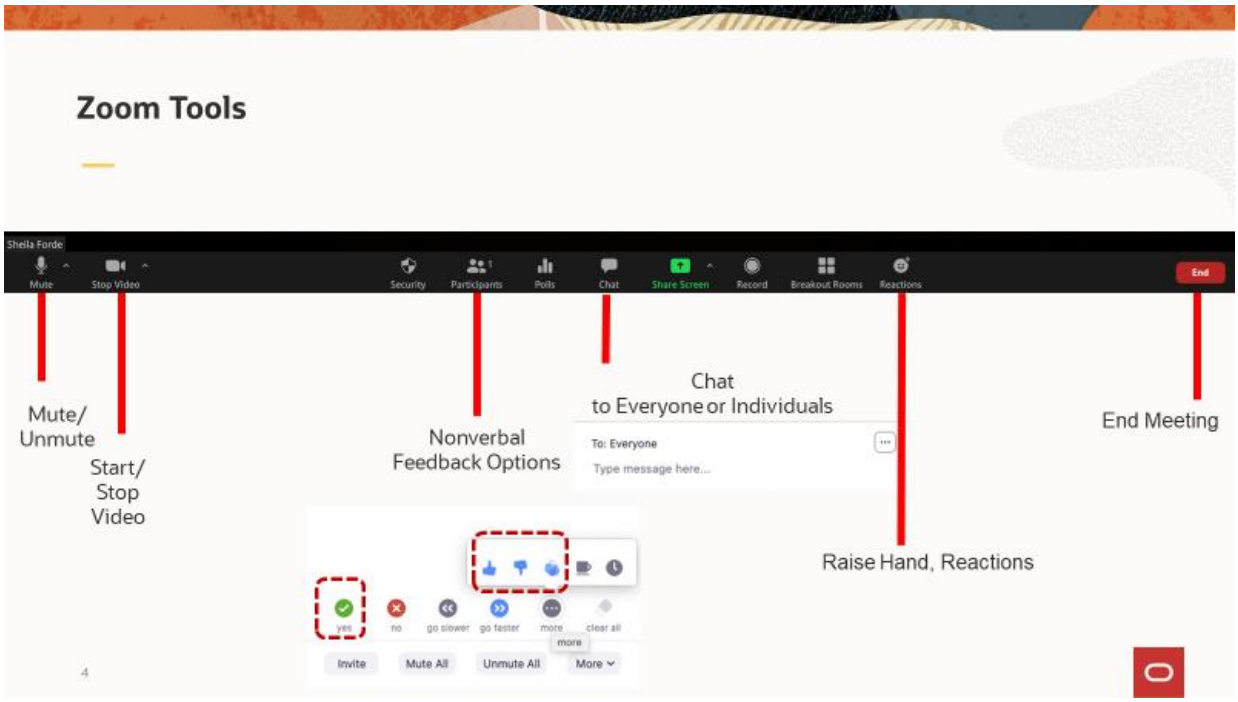

Preparation

1. Save this document for future reference.
2. Ensure that you have set up your ZOOM account and can log into it.
    a. You may not need an account and can attend sessions using ZOOM straight from your internet browser by accepting the email invitation sent to you.
    b. If you already have an account you may need to update it to the most recent version.
3. Accept the email invitation to the session.
4. For the session itself find an area that has little or no background noise.
5. Check the following
    a. You have access to the internet in your location
    b. The webcam on your laptop or computer is working as you will want to activate during the session
    c. A headset with a microphone is recommended but laptop speakers and microphone should work
    d. Closing unnecessary applications on your laptop/compute can improve session performance and audio quality. Re-booting before the session also helps performance by clearing the cache

Joining the session

1. Best practice is to join the session 5 minutes before the notified start time.
    a. A moderator will be available to help you with any issues you may have with ZOOM
2. You will have received and accepted your invitation to join the session which will include a link to "Join via computer" as well as phone numbers for a conference call option.
3. To join click on the link in your invitation to join via computer.
    a. You may be instructed to download the Zoom application or use the browser – either will work
    b. You will be prompted to input the meeting password.
    c. You have an opportunity to test your audio at this point by clicking on "Test Computer Audio" which you can test or skip this step
    d. Once satisfied that your audio works, click on "Join audio by computer"
    e. It is possible to join the meeting by entering the unique 9-digit Meeting ID included in your invitation
    e. If you are having trouble hearing the meeting, you can use your laptop for the video feed and use your telephone to join the audio feed by dialing the teleconferencing number provided in your invitation and using the unique 9-digit Meeting ID
    f. It is not recommended to attend sessions using only your mobile phone

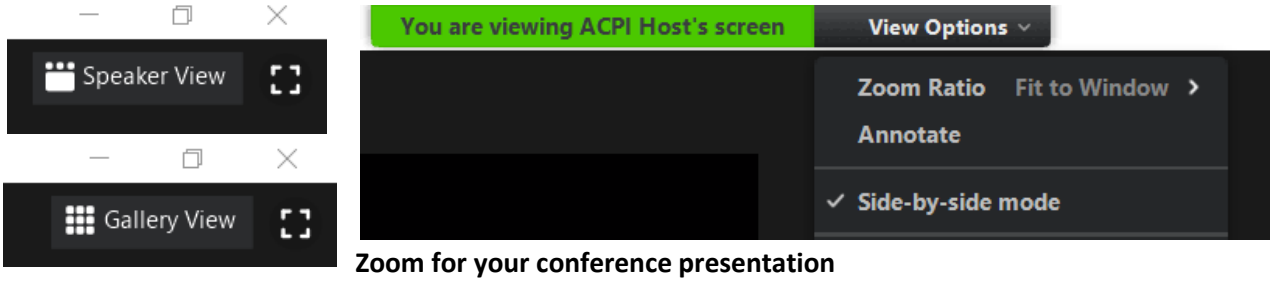

During the Meeting

1. Your participant controls are in the lower part of the ZOOM screen – you may have to move the mouse down to have them displayed. The ones you will use most allow you to:
    a. *Mute/Unmute* your microphone
    You will be asked to stay muted unless you are talking – for example asking or answering a question – the host is able to mute everyone
    b. *Start/Stop Video* turns on/off your webcam, usually keep your webcam **on** for the session
    c. *Participant* allows you to view the list of participants and give non-verbal feedback in a pop-out window.
        i. The pop-out window includes a "Raise Hand" icon if you have a question during the session
        If you have a moderator, they will be checking on questions throughout the session
        ii. On your Zoom screen you will also see a choice to toggle between "speaker" and "gallery" view to see the webcam images of all participants
        "Speaker view" shows the active speaker
        "Gallery view" tiles all the meeting participants and whoever is currently speaking will appear at the top of the tiles
        The host can 'spotlight' a presenter so they remain highlighted even if someone else speaks
        iii. You may be asked to give a 'thumbs up' during the session to check you can see and hear
    d. *Chat* gives you the option to chat to everyone on the session or privately to individuals. You can also use it to ask or answer questions, comment or give feedback
    e. *Reactions* is another way to give feedback or react to the facilitator
    f. *Leave Meeting* - the session will be ended by the facilitator, but you can leave earlier using this button.

2. Addition Screen view options are available at the top of the screen.
    a. During presentations we suggest you opt for speaker view
        i. The symbol is a solid square with smaller squares above it
        ii. When slides are shared, we suggest you choose side-by-side view. You will only need to set this up once and it will remain the default setting.
    b. During networking or discussion settings we suggest you choose gallery view to see all participants in the group on your screen.
        i. The symbol is 8 small squares
        ii. If there are too many participants for the size of your screen (this is very limited on a phone or tablet) you may need to scroll through to see everyone.
    c. You can move between full screen mode and window mode by clicking the button in the far-right corner which resembles 4 corners.
        i. When in window mode you can minimize the screen and the speaker will be in a small box floating above the page you are looking at.

Zoom for your conference presentation

1. Prior to your conference session starting it will be useful to open your slides on your PC so that you have them ready to share when you start your presentation.
    a. It can also be helpful if all other windows are closed on your computer so that the slides are the only option to share.
2. When the chair of the session tells you it's your turn to speak ,click the share button in zoom
    a. The share button is green and located in the middle of your toolbar.
3. The sharing window will then ask you which of your current windows you wish to share. Select Microsoft Powerpoint. If your presentation has sound or video make sure to tick the share computer sound box.
4. Back in Powerpoint click on slideshow mode and start your presentation.
    a. The rest of the group will see the same screen that you do, so presenter mode will not work for this presentation.
5. When you have finished click stop share button, you may need to move your mouse to the top of the screen to see this.
